the development of an excitation control method as described on independent claim 3, comprising the steps of setting:

a reference voltage of the output terminal according to the reactive current,
a reference voltage of an output side of the transformer,
a phase compensation transfer function to quicken attenuation of an electric power fluctuation, and
controlling an exciting system of the synchronous machine according to a difference between the reference voltage of the output terminal of the synchronous machine and the voltage of the output terminal of the synchronous machine.

Dependent claims 2 and 4 are considered allowable by their respective dependence on allowed independent claims 1 and 3.
